

For Developers

Experience contains a lot of functions and libraries to accelerate Business Central development.

If you want to explore these functions, clone the repository from GitHub and search the docfx documentation inside the source files.

Many functions are marked with a preprocessor symbol. The other ones are considered as general purpose and always available.

List of functions

Symbol	Description
W1XX001A	Generic API Page for incoming requests with dynamic JSON body implemented by interfaces
W1XX003A	Bulk importer to populate database with structured JSON objects
W1XX004A	Skeleton for recurring document exchange (EDI) tasks implemented by interfaces
W1XX006A	Added several fields (normally hidden) to list pages
W1FN010A	Better posting description: "Document Type" and "Partner Name" in Sales and Purchases
W1FN011A	Skip error if negative / positive amount mismatch in Gen. Journal Line; skip error if invoice already exists
W1FN013A	Average payment days (integer value) calculation
W1FN014A	Average finance charge terms grace period days (integer value) calculation
W1FN016A	Allow earlier posting for vendor entries
ITXX004A	Recalculate payment % from amount
ITXX005A	Check external document no by year during posting
